Course Title: Artificial Intelligence

Lecturer: Dr. Öğr. Üyesi Hazem AL-NAJJAR

Course Content

The course begins with a description of the development of artificial intelligence in past centuries. Artificial Intelligence approaches are explained briefly to understand how different AI models are developed. The search models are then explained to show how AI can develop solutions to different problems in our lives. We'll spend some time understanding the types of artificial intelligence, machine learning, deep learning, and the relationship between the different parts. Various examples are covered in the course to emphasize the idea of artificial intelligence and finally to explain the different and important applications in the present and future.

Topics To Be Covered In The Course

1)   Future of the World : Artificial Intelligence
