## AGENDA OF PERSONNEL

## ACADEMIC

**Lect. Mehmet GÖL** has been appointed as the Head of the Department of Electronics and Automation at the Vocational School of Health Services, as of 23.03.2021.

## BY A DOYEN

**On Society, Architecture and Education**

With a general view, architecture seems to be a field in which our daily life passes and therefore everybody speaks about or acts. However, it may be misleading to see an occupation based on thousands of years in narrow patterns.

In the intellectual plan, the product of architecture emerges by combining the concrete (mass-fullness) and the abstract (space-emptiness). In a broader sense, it is created by combining tactile and non-tactile elements. This act of creating, form-gaining, is the design-shape activity, which is a subjective process. Achieving reality or becoming definite, which the mystics call the creed-manifestation, ends with

the sharing of the idea, that is, its externalization. The series of activities briefly described here actually carries interactive features. In other words, it continues until the optimal or most satisfactory solution including other factors is found - including the production process. Design is an issue of intellectual property due to its subjective nature. However, it is also true that given the quantity and complexity of the products it is never a solitary effort; it requires cooperation between specialties. It has been like this throughout the ages. Societies have changed and developed. Knowledge and expertise areas have changed and developed. Needs have changed and developed. Tools and equipment have changed and improved. But the core of the matter has always remained.

The combination of these elements in the historical process has developed based on the materials and technology of the time. In this process, the memory and values of the society, hence its tastes, settle and form an important part of the culture of that period. Culture is not easy to transform and change, it is slow. However, the revolutionary changes occurring in the basic modes of production have affected this phenomenon, and still do.

Values that were slow in the early periods and therefore absorbed in long periods of time have permanent qualities in the memory of societies. Some people do not want their changes. The change, diversification and acceleration of the spread of knowledge diversified people's tastes. So is the use of technology and materials. It can be said that the diversity of references brought about by this situation brings along a confusion. It is possible to express the situation as wealth, depending on their point of view.

It is clear that architectural education is also affected by the dilemma mentioned above: There is a collective personal architectural values-kitsch conflict with the acceptance of architecture, which has reached the same level after being distracted over thousands of years. It only has four years from scratch to influence and guide students' understanding of architecture after graduation. The next is about their stance in life and their place in building production conditions.

In the 21st century, the design factor in architecture has come to the fore again for the reasons mentioned above. Design education, which is the backbone of architecture, is about teaching ways to be creative and innovative, and is significantly different from similar professions with its unique structure. One-to-one relationship with the student, in conceptual education, is a feature that should not be harmed, consecutive sequences and preservation.

Faculty of Engineering and Architecture  
Faculty Member of the Department of Architecture

## NEWS

### **Everyone makes this mistake at home: It can lead to typhoid**

**MARCH 22****2021****GELISIM NEWS**

Almost everyone consumes it by cooking during the day and reheating it the next day. Stating that this situation triggered the formation of bacteria and chemicals in waiting meals, Asst. Prof. Dr. Murat Doğan made warnings. Emphasizing that meals should be prepared and consumed daily, Doğan said: "The bacteria formed in the reheated food can lead to typhoid."

Meals that are cooked more than the number of people are put in the refrigerator to be eaten again the next day at everyone's home. The food that comes out of the refrigerator takes its place on the tables by being reheated. Drawing attention to the fact that this situation experienced in almost everyone's home is a mistake, Asst. Prof. Dr. Murat Doğan pointed out that reheated meals may cause food poisoning and typhoid, and warned about

cooking and storing the meals. Emphasizing that making and consuming food daily, especially in restaurants, is a definite rule in terms of food safety, Doğan said: "Our basic principle in terms of health should be to cook daily and consume it daily, this is the right thing. Our mothers and wives have to cook for a few days due to their working life."

**More than 70 thousand students attended career planning courses****MARCH 22****2021**

The career planning course prepared by the Presidency Human Resources Office to create career awareness among university students and to support students' career journeys was added to the curriculum of the first graders of the university. A total of 70 thousand 162 students from 47 universities voluntarily attended the courses, which consisted of 14 weeks of content. It is aimed that the career planning course will be delivered in all universities in the 2021-2022 academic year.

"THE SUBJECTS PREPARED BY THE EXPERTS"

A total of 70 thousand 162 students from 47 universities participated in the career planning course, which sets an example in the course practices for the career development of university students by the state administration in the world. The 14-week lesson plan and its contents were prepared in a common standard by the experts of the subjects working in the Presidency in order to provide equal opportunities to all students.

**Trainings turned into exhibitions****MARCH 23****2021**

The "A Touch to Design and Art" trainings organized for the first time this year by Istanbul Gelisim University Faculty of Fine Arts, ended. The digital exhibition created with the projects of the students who have completed the trainings organized to enable students to use their talents and make production is opened to access.

The "A Touch to Design and Art" trainings organized to help students determine the areas where they will be successful and create a career plan, turned into an exhibition. Monogram works designed by students in the training titled "New Trends in Graphic Design" conducted by Lect. İrem Fulya Özkan started to be exhibited in the digital environment. The digital exhibition is made available on the Artsteps: Istanbul Gelisim University Virtual Gallery platform.

**Digital art is growing: Artists talk**

MARCH 24

2021

Digital art continues to grow day by day. Stating that the artist should be open to innovations, Painter Ahmet Özel emphasized the importance of the certification system. Özel stated that the spirit of the work cannot be felt in digital art. Graphicist Demet Koca, on the other hand, stated that digital art and graphic design are in the elbow theme and drew attention to the fact that this change in art is also explained in the lessons.

With the developing technology, the way of production and distribution of art has also changed. With the impact of digitalization, the crypto art market is growing rapidly. Artworks sold with NFT, ie unchangeable money, are breaking records. Recently, an artist's digital collage in jpg format was sold for \$ 69.4 million. Painter Ahmet Özel and Graphic Designer Demet Koca, who

have had numerous solo exhibitions abroad and in Turkey, evaluated the certification system by interpreting the effects of digitalization on art.

# THINGS TO KNOW

## ABOUT NEW CORONAVIRUS

All necessary measures are taken for the **coronavirus** revealed in Turkey and the World at **Istanbul Gelisim University**. **Things to know about coronavirus are as follows:**

### What are the new coronavirus symptoms?

- The most common symptoms are **fever, cough and respiratory distress**.
- In severe cases, **pneumonia, severe respiratory failure, kidney failure and death** may occur
- Incubation period is between **2 and 14 days**.

### How is the virus transmitted?

- It can be transmitted by the contact of the droplets caused by **coughing and sneezing** with the contact of the **mouth, nose and eyes** of other individuals in certain environment and by touching the surfaces where the droplets adhere and taking hands **into the mouth, nose or eyes**.

### What to do to be protected from the virus?

- When **coughing or sneezing**, the mouth and nose should be covered with a **disposable tissue**, if there is no handkerchief, the mouth should be closed with the **upper sleeve or elbow**, not with the palms.
- **Handshaking and hugging** should be avoided.
- **Mouth, nose and eyes** should not be touched with dirty hands.
- Hands must be washed for **at least 20 seconds** in accordance with the **Handwashing Instructions** found in the toilets. In the absence of water and soap, **alcohol-containing hand antiseptics** should be used. **Cologne of 70-80 degrees** also serve as disinfectants.
- Offices and classrooms must be **ventilated hourly**.
- Places frequently used by many people such as common areas and door handles should be **disinfected every 2 hours**.
- Hands **must be washed** after using **public transportation**.
- Because the virus progresses faster in people with low immune system; **a balanced and healthy diet** is required. Foods **must be washed thoroughly** before consumption.

### What to do if there are symptoms?

- If you have come from countries with infections **in the past 14 days**, apply to the **nearest healthcare facility** by wearing a **surgical mask**.
- If you are **coughing, have a fever and have difficulty at breathing**, apply to the **nearest healthcare facility** by wearing a **surgical mask**.
- **Always wear your mask** when you are in the same room with **a person who is recommended insulation** at home.
