

CYBER SECURITY WORKSHOP

Conducted by: Asst. Prof. Serkan GÖNEN

Date and Time: 27.01.2022 / 12:00-13:00
03.02.2022 / 12:00-13:00

Content:

Information technologies have started to be used in almost every aspect of our daily life in our age, which is called the information age. Therefore, all of our information is digitized, including our private information. This digitalization has not only changed the way we communicate, but also created a new way of working and living. For this reason, Information Technologies brings many opportunities and abilities such as digitalization, productivity, efficiency, and time saving into our lives. If the security of the said information technologies cannot be ensured, irreparable damages may be encountered due to significant gaps and threats in the systems. Therefore, the most basic issue to be considered in the use of information technologies is security. One of the most important components of information security is the human factor. This factor is often overlooked or forgotten, but it is also described as the weakest link in the information security chain.
