## PREFACE

Dear Students,

Our faculty, which started education in 2020, has accepted students for the 3rd term this year and has more than 300 students and strong faculty members; it is developing with ever-increasing momentum.

With equipped preclinical and simulation laboratories, a modern Dental Hospital, and providing advanced technologies for our students, it is taking firm steps towards becoming a respected higher education institution that is preferred primarily in our country with its high education quality.

With 30 faculty members and 11 professors, we aim to train dentists who are open to scientific developments, respect social value judgments, and be devoted to ethical and legal values by providing theoretical and practical experience with a student-oriented education and the latest technological opportunities.

Our outstanding academic staff in our faculty, in addition to dental education, closely follows the developments in the world and contributes to the science of dentistry with valuable articles by continuing scientific research and publication activities in the national and international arena. In addition, Dental Hospital, our helpful staff members in our Dental Hospital provide treatment services to our society in the field of oral and dental health by using advanced technological methods and contribute to the development of our country.

The distance that our faculty has gained in education and health in this short period, and the valuable contributions of our administrative and academic staff, especially our university administration, are the essential issues that strengthen our hope for achieving our goals for the future.

## Research Highlights

### History

Istanbul Gelisim University Faculty of Dentistry was established in 2019 and started its educational activities in 2020. Istanbul Gelisim University Faculty of Dentistry, which constantly changes and develops in a contemporary education approach, takes into account national and international dynamics, and offers its students the opportunity to receive education at international standards, has simulation laboratories that can provide training to 94 students at the same time, a preclinical laboratory with a capacity of 144 students and a student body with 76 units, including training with the clinic.

### Mission

To train qualified dentists who have a sense of responsibility towards society, provide high-level service by following the innovations in professional knowledge, skills and dental technology, and can use evidence-based dentistry practices in their professional practice.

### Vision

Pioneering in all matters related to oral and dental health, focusing on qualified research and contributing to the development of oral and dental health practices in research, not compromising the quality of education and training, providing treatment services in line with quality management standards and ethical principles, respecting the rights of patients, developing the development of its employees. To be a leading educational institution at the national and international level, giving importance and providing continuous development opportunities.

Research  
Highlights

Faculty of  
Dentistry

Faculty of Dentistry consists of Clinical Sciences and Basic Sciences divisions.

The Division of Clinical Sciences includes the Departments of Oral and Maxillofacial Surgery, Oral and Maxillofacial Radiology, Endodontics, Orthodontics, Pediatric Dentistry, Periodontology, Prosthetic Dentistry and Restorative Dentistry.

The Division of Basic Sciences includes the Department of Basic Medical Sciences.

Department of Oral, Dental and Maxillofacial Surgery; It is the department of dentistry in which the diseases in the mouth, teeth and jaw area are diagnosed by clinical and radiological examination and treated using drugs and surgical methods.

Oral, Dental and Maxillofacial Radiology Department systematically examines oral and maxillofacial tissues and organs, interprets all physiological and pathological changes of these structures clinically and radiographically, diagnoses oral, dental and mucosal diseases, and develops the most appropriate treatment plan for the improvement of these tissues. In addition, the clinic prepares patients and directs them to the specialities for their treatment.

Department of Endodontics is the science that deals with root canal treatment of teeth. With endodontic treatment (canal treatment), root canals are completely emptied, and re-inflammation is prevented with root canal filling. Thus, it contains a tooth from being pulled out and ensures that the function of the tooth continues in the mouth for many years.

Orthodontic dentistry; is the science that deals with diagnosing, preventing, and treating inappropriate positions of the teeth and jaw. The primary purpose of orthodontic treatment is to order the teeth in the jaw regularly and to achieve closure in harmony with the teeth in the opposite jaw. In addition, orthodontic treatments aim to correct functions such as smile aesthetics, chewing, speaking and breathing.

# PEDODONTICS

The Department of Pediatric Dentistry deals with diagnosing and treating oral and dental diseases and applying preventive treatments from infancy to adolescence.

**Research  
Highlights**

 Faculty of  
Dentistry

Periodontology is a branch of dentistry that examines the structure of hard and soft tissues that support teeth and dental implants, protects existing health, and diagnoses and treats diseases of related tissues. Periodontal health of the teeth is necessary for them to fulfil their functional duties, but it is also an essential aesthetic requirement.

# PROSTHETIC DENTISTRY

Department of Prosthetic Dentistry; It is the department in which missing teeth and surrounding tissues are restored with appropriate materials to regain the missing, lost, deteriorated aesthetics, comfort and health. In addition, the department deals with constructing fixed prostheses, removable prostheses, maxillofacial and implant-supported prostheses, and treating temporomandibular disorders.

Research  
Highlights

Faculty of  
Dentistry

## RESTORATIVE DENTISTRY

Department of Restorative Dentistry; It deals with the treatment methods applied to eliminate tissue losses in the teeth. It plays a role in restoring the patient's lost function, phonation and aesthetic features. In the department, composite and amalgam fillings, laminate veneer restorations, endocrine and single crown, fibre post restorations, inlay-onlay-overlay restorations, teeth whitening treatments, diastema closures, and tooth sensitivity treatments are performed.

Research  
Highlights

Faculty of  
Dentistry

The Department of Basic Medical Sciences provides the basic science that forms the basis of the first years of the dentistry curriculum, which is necessary for dental candidates to grasp professional knowledge and skills fully. Students are taught basic sciences such as anatomy, histology, biochemistry, microbiology, physiology, organic chemistry, biophysics, medical biology and genetics, pharmacology, and pathology. In addition, basic statistical methods used in scientific research are also included.

# RESEARCH AREAS

Research  
Highlights

## SOCIAL RESPONSIBILITY PROJECT

### The goal of the project:

It is a social responsibility project by Istanbul Gelisim University Dentistry Club to increase the knowledge of first-grade primary school students studying at Şehit Vedat Barceğci Primary School about oral and dental health and to draw attention to correct tooth brushing techniques.
