

IGU CYBER ACADEMY PROJECT OFFERS EMPLOYMENT OPPORTUNITIES!

A 'Cyber Academy Project' is being carried out within Istanbul Gelisim University on subjects such as artificial intelligence algorithms, programming languages and cyber security protocols.

IGU Cyber Academy Project, implemented within Istanbul Gelisim University, aims to train individuals who are equipped for the sector in the fields of artificial intelligence, programming and cyber security. Within the scope of the project, the pre-registration of 100 students has been approved. There are 20 additional quotas in education as well. The training will start in July and last six months in total. The project offers the opportunity to employ 60 people who have successfully completed their education in the sector.

Asst. Prof. Dr. Serkan Gönen, from IGU Software Engineering Department, Faculty of Engineering and Architecture, stated that they aim to provide students with practical skills as well as theoretical knowledge in the training. Asst. Prof. Dr. Gönen also added the following: "During the program, students will receive detailed training on topics such as artificial intelligence algorithms, programming languages and cyber security protocols. In addition, various workshops and seminars will be organized so that they can follow the current developments in the sector and gain experience with applied projects."

Thanks to the training provided by academicians and industry professionals who are experts in their fields, students will both reinforce their academic knowledge and have the opportunity to develop solutions to problems they may encounter in the industry. Asst. Prof. Dr. Serkan Gönen: "The knowledge and skills of the students will be measured through evaluation processes and project presentations at the end of the program and the most successful ones will be selected for employment."

10 ADVICE FROM EXPERTS TO THE CANDIDATE STUDENTS' PARENTS WHO WILL ENTER YKS (HIGHER EDUCATION INSTITUTIONS EXAM)!

Parents can play an important role in their children's decisions at many turning points. Sometimes school, profession or even clothes... Parents can influence their children's decision or make decisions on their behalf. Shortly before YKS Exam, Expert Psychologist Gizem Açıkgöz and Expert Psychological Consultant Elif Ünal listed their recommendations.

Expert Psychologist Gizem Açıkgöz and Expert Psychological Consultant Elif Ünal from Istanbul Gelisim University, who raised parents' awareness about not putting pressure on students and being with the student to make the right choice, listed the responsibilities of parents during their university choice as follows:

During the university preference periods, families should understand the stressful time experienced by their children well and should not engage in attitudes and behaviors that will knock them out or cause them to withdraw against their wishes.

Parents should give priority to the student regarding the choice of family, university and department and share his/her ideas by talking to each other in cases where the student has difficulty in making decisions.

Parents should ensure that the student is aware of the issues s/he feels good or bad about, or is not interested in. They should be a guide for the students to take their goals kindly that they cannot achieve.

Parents should not see their children as a substitute for achieving goals that they cannot achieve themselves and should not force their own dreams to be their children's dreams.

The family should recognize the personality traits of their child and guide them in choosing the right profession. If they do not have sufficient knowledge and equipment, they should get support from experts.

Parents should trust and support their children's decisions about choosing a profession.

They should support the right decisions taken by their children during the preference period after the exam and they should leave the preference processes to the child.

Parents should recognize that their child is an individual and should trust their potential.

Parents should know that each child is different and unique. They must not compare them with different individuals such as neighbors, friends or siblings around them.

Parents should listen their feelings, expectations and wishes. They should always support their future plans and dreams.
